AT&T Wi-Fi Handles More Than 85 Million Total Connections in 2009, More Than Four Times 2008

DALLAS, Jan 25, 2010 /PRNewswire via COMTEX/ -- AT&T's mobile broadband customers are increasingly using the company's Wi-Fi network - the nation's largest - to connect to the Internet for e-mail, searching the Web and downloading music and video. AT&T today reported that its customers made a record 85.5 million connections to the Internet in 2009 using AT&T's Wi-Fi network, four times the number of Wi-Fi connections made in 2008.

In the fourth quarter 2009, AT&T customers made 35.3 million Wi-Fi connections - up 10 million connections from the third quarter of 2009. Fourth quarter connections also surpassed the number of connections made in the entire first half of 2009.

AT&T, which offers the nation's most advanced mobile broadband experience, expects Wi-Fi usage to continue to surge as more customers utilize Wi-Fi on their smartphones and integrated devices and have Wi-Fi included with their service.
